QUALITY

THE MOONSHINER

Moonshine was originally a slang term for distilled spirits that were produced illicitly, without government authorization. In recent years, products like gin and whisky labelled as moonshine have seen a resurgence due to their limited number of bottles produced.

The label fascinates with the application of the LUMAFIN foil by Leonhard Kurz, details like 3D nano- and microembossing and the precisely applied optical lens, which adds the spatial effect to the moon.

GIN KYBURG

This Gin label is designed to meet the demands of today's modern spirits and showcases an exclusive design.

A one color print (black only) embellished with fine line elements and 3D embossing with transparent foil form the basis of the label. Adding the security patch with 3D micro-embossing, a holographic lens in silver and a gold hotfoil gives the label its exclusivity.

Foil embossing and partial nanoembossing on the ring

Fine line foiling

Foil embossing and partial texture embossing

3D foil embossing (transparent foil)

3D foil embossing (transparent foil)

Security patch with foil microembossing in 3 steps:
 1. holo lens chrome silver
 2. foil gold
 3. transparent foil

RUM EL GOLPE

The El Golpe Rum label is an example how embellishment can enhance a rather simple motif. By emphasizing individual elements with glossy, transparent foil, the image is given spatial depth. This depth is further enhanced with the 3D effect lens on the moon. Microembossing on the brandname gives the label a special touch.

3D effect lens

3D foil embossed
(right bevel microembossed)

3D foil embossed
(full area microembossed)

Glossy transparent foil

3D effect lens

Microstructured waves

Glossy transparent foil

TEQUILA

The design is inspired by elements around tequila. Santa Muerte, the patron saint in Central and South America, to whom tequila is offered at shrines in addition to roses and cigars, appears alongside the agave, from whose heart the tequila is extracted. The design is characterized by different 3D embossings and nano structured details. A registered holographic patch is placed as a cherry on the top.

Ornament foil surrounded by a ring of embossed transparent foil

RIESLING KYBURG

The concept for the Kyburg wine labels: traditional and rather plain with a focus on the brand 'Kyburg'. The black foil surrounded by very fine, golden lines combined with 3D embossing makes the brand name the dominant design element. The microembossing of the golden frame adds value to the label.

RIESLING KYBURG FOIL ONLY

Inspired by the Riesling Kyburg label, the idea was born to create the design using only foils without preprint. The coloured, graphic illustration of the initial design was replaced with black foil. The castle 'drawn' with foil adds elegance and exclusivity, the micro-embossing of the golden frame adds value to the label.

Additionally, the transparent holographic lens on the neck label enhances the overall appearance of the bottle on the shelf.
